

Problem Statements: String

Practice problems designed to strengthen Python fundamentals through progressive hands-on programming.

LEVEL	HOW TO USE THIS SHEET	TOTAL PROBLEMS
Basic to Intermediate	Write and test each program independently. Try solving without copying ready-made code.	16

01	Write a Python program to input a string and display it in uppercase and lowercase.
02	Write a Python program to find the length of a string without using len().
03	Write a Python program to count the number of vowels and consonants in a given string.
04	Write a Python program to count uppercase letters, lowercase letters, digits, and special characters in a string.
05	Write a Python program to check whether a given string is a palindrome.
06	Write a Python program to reverse a string without using slicing.
07	Write a Python program to remove all spaces from a given string.
08	Write a Python program to count the frequency of a given character in a string.
09	Write a Python program to find the first occurrence and last occurrence of a character in a string.
10	Write a Python program to replace all occurrences of a specified word in a sentence with another word.
11	Write a Python program to check whether two strings are anagrams of each other.
12	Write a Python program to find the most frequently occurring character in a string.
13	Write a Python program to remove duplicate characters from a string while preserving the original order.
14	Write a Python program to count the number of words in a sentence.
15	Write a Python program to find the longest word in a sentence.
16	Write a Python program to capitalize the first letter of every word in a sentence without using title().

Challenge: After solving all problems, revisit any solution that uses unnecessary built-in functions and try implementing the logic manually.
